WEEKLY MORBIDITY REPORT  
EXPLANATORY COMMENT

This report presents each week the annual admission rates per 1000 average strength for certain communicable diseases, venereal diseases, and all causes combined (diseases, injuries and poisonings). Source material is the weekly communicable disease reports submitted to BuMed by all shore stations within the continental limits of the United States.

Admission rates are calculated on an annual basis to facilitate comparison with corresponding annual, quarterly or monthly figures. Such annual rates of admission indicate the number of admissions per 1000 average strength which would occur over a year's time if the current week's experience continued for a year. They are obtained as follows:

$$\frac{\text{Number of Admissions During the Week} \times 52}{\text{Average Strength for the Week}} \times 1000$$

In order to make this report promptly available the figures contained herein are presented, in general, as reported. The symbol # indicates that current data are not available. In such cases, the most recent data are utilized.

Shore stations with an average strength of 500 or more are listed individually; stations under 500 strength are grouped.

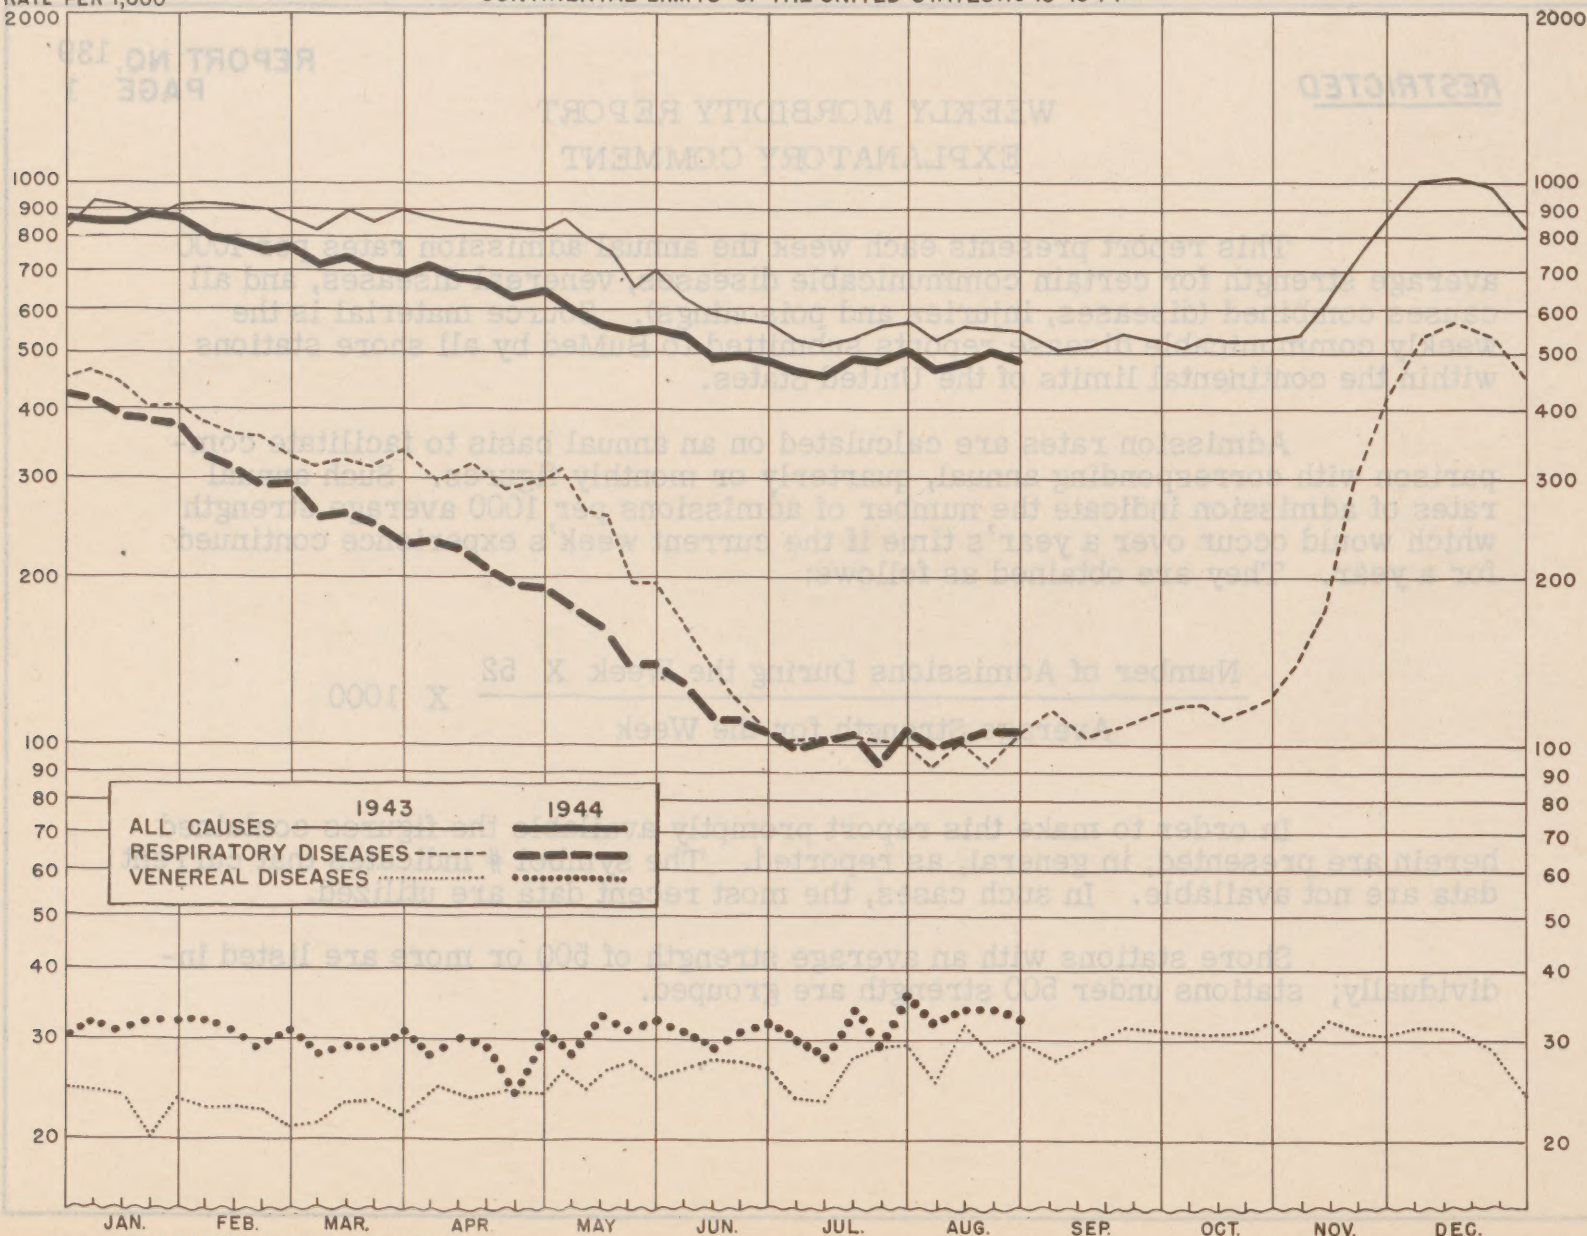

RESTRICTED

### CURRENT TRENDS

Week Ending 26 Aug 1944

The admission rate for All Causes after a rise in the two previous weeks fell this week. The 1944 curve continues to stand well below the 1943 curve. The highest rate (857) was reported for the Potomac and Severn Commands, the lowest rate (348) for the 12th District.

The respiratory disease curve fell slightly but for the fifth consecutive week the 1944 curve has stood above the 1943 curve for the corresponding period. The highest rate (216) was reported for the 13th District, the lowest (60) for the 12th District.

The venereal disease curve fell slightly this week. The rate of 33 for this week compares unfavorably with the rate of 30 reported for the corresponding week of 1943. The 12th District reported the highest rate (40), the 6th District the lowest rate (20).

Influenza and Catarrhal Fever. The mid-summer level (between 60 and 70) which began with the week ending June 24, continued this week with a slight rise to 68.4. This compares favorably with a rate of 118 for the corresponding week of 1942 and a rate of 101 for the corresponding week of 1943. The highest rate (104) was reported for the 13th District, the lowest (41) for the 12th District.

Pneumonia--Broncho and Lobar. For the ninth consecutive week the rate for these infections has been reported at 1. The 1944 curve has continued to stand below the 1942 and the 1943 curve since the week ending June 3. The highest rate (4) was reported for the 13th District. No cases were reported for the 4th District or the Potomac and Severn River Commands.

Pneumonia, Atypical. After a rise to 3 last week the rate for this infection dropped back again this week to 2. The 1944 curve continues to stand above the 1943 curve. Since the week ending July 1 the atypical pneumonia rate has exceeded the rate for broncho and lobar pneumonia combined. The highest rate (5) was reported for the 8th and 11th Districts. The 1st, 4th, and 13th Districts and the Potomac and Severn River Commands reported no cases.

CURRENT TRENDS --CONTD.

Tonsillitis and Pharyngitis, Acute. The rate for these infections was reported again this week at 34. The highest rate (108) was reported for the 13th District, the lowest rate (18) for the 12th District.

Rheumatic Fever, Acute. The rheumatic fever curve dropped this week to the lowest point yet recorded in 1944. The rate of 0.83 for the week compares very favorably with the rate of 1.4 for the corresponding week of 1943. The 13th District reported the highest rate (4). No other District reported a rate over 2.

Scarlet Fever. The scarlet fever curve stood again at 3 this week. This compares favorably with a rate of 4.4 for the corresponding week of 1943. The curve turned upward only in the 5th, 11th, and 13th Districts. The 13th District reported the highest rate (52). Only four other Districts reported any cases and in none of those did the rate exceed 0.76.

Cerebrospinal Fever, Meningococcic. The rate for this infection after a slight rise in the previous week fell again this week continuing the downward trend which started the week ending the 26th of February. Only three Districts reported any cases and none of the three reported a rate in excess of 0.71.

Malaria. The malaria rate continued for another week at 3. This compares favorably with a rate of 4 for the corresponding week of 1943. The highest rate (12) was reported for the 5th District. The 4th District reported no cases.

Measles. The rate for measles rose slightly this week but not enough to seriously disturb the general trend downward. The curve for the past four weeks has stood well below the 1942 and 1943 curves for the corresponding period. The 13th District reported the highest rate (5). No other District reported a rate over 2.

RESTRICTED

## WEEKLY MORBIDITY REPORT

REPORT NO. 139  
PAGE 5

### CURRENT TRENDS --CONTD.

Poliomyelitis, Anterior, Acute. Only two new cases of poliomyelitis were reported for the week among Naval personnel in Continental Shore Stations. One case was reported from the 3rd District and one from the 5th District. The cumulative total of cases occurring among Naval personnel in Continental Shore Stations since Jan. 1, 1944 is 34.

The six States reporting the highest incidence of poliomyelitis according to the U. S. P. H. S. figures for the week ending August 26 were as follows:

New York	581	Michigan	94
Pennsylvania	139	Virginia	63
Ohio	97	Minnesota	57
